

**MINIMIZE PROJECT RISK.  
INFRASTRUCTURE LOCATING,  
DATA COLLECTION & MAPPING.**

## About Us

Badger Infrastructure Solutions began locating and mapping underground infrastructure in June of 2020. Our Locate Technicians are trained and evaluated on locating based competencies with a steadfast perspective that the best way to prevent damages to underground infrastructure is to give excavators accurate information. Badger Locating Solutions combined with Badger's industry leading hydro-excavation platform provides clients a complete damage prevention resource.

## Protect Your Assets

A data driven decision on where and how to excavate prevents costly damages to underground infrastructure. We do more than just mark the surface! Excavators can now dig with confidence knowing that Badger confirms the quality and accuracy of locates by integrating precise GPS data and locate meta-data. Accurate locates prevent damages to underground infrastructure, and other costly construction issues.

Documentation of work performed prevents future incidents and saves you from paying for redundant work.

**SAFETY IS WHAT WE DO.  
SAFETY IS WHAT WE DELIVER.**

## SERVICES OFFERED:
